

## Introducing **Site Saver™** the best way to control vascular access.

This simple, yet powerful device is designed to improve patient outcomes and the quality of medical care by focusing on intravenous (IV) site management.

The Site Saver™ device is designed to benefit the patient and healthcare professional through shortened prep time, better comfort, increased protection and enhanced positive flow.

### About

Site Saver™ is a vascular alignment and stabilization device developed by Midwest Applied Technologies - an upper-Midwest innovation firm dedicated to practical yet powerful product solutions that improve lives. The inspiration for the Site Saver™ design came from patient experiences where it was clear that there was a better solution than the traditional approach to administering and managing vascular access devices. Key to the Site Saver™ design is the ability to stabilize and align the IV (and associated tubing) in a quick, easy, safe and ergonomic way.

## Why Site Saver?

Cost reduction and treatment outcomes are more important today than ever before in a rapidly changing healthcare environment. In addition, the number of intravenous therapies and other arterial access treatments continue to increase. These factors combined with first-hand patient experiences fueled the development of a product that could dramatically reduce costs and improve patient outcomes.

## The Opportunity

The opportunity to bring an evolution in IV management to market is here. The time to capitalize is now. For more information on the Site Saver™ please contact Midwest Applied Technologies toll-free at 1-877-794-1390 or email us at [info@sitesaver.biz](mailto:info@sitesaver.biz).

A portion of profits from purchases of the Site Saver™ help to provide funding for vascular access education to healthcare providers in training centers.
